William Columbia

Charleston, SC | 864.640.1157 | willcolumbia01@gmail.com | github.com/willcolumbia

I am a Computer Science graduate who builds full-stack web applications, and I use AI assistance to pick up new tools and concepts quickly. I have worked on both the technical and business sides, supporting production systems in IT and building sales reporting in Salesforce.

PORTFOLIO & LINKEDIN

Portfolio: willcolumbia.me | **LinkedIn:** linkedin.com/in/williamcolumbia

TECHNICAL SKILLS

Languages	Python, SQL, JavaScript, C++, R
Web Development	Flask, Django, FastAPI, React, REST APIs, HTML/CSS
Data & Reporting	SQL, relational data modeling, data pipelines (ETL), pandas, NumPy, Hadoop MapReduce, Salesforce reports and dashboards
AI Tools	Claude Code, GitHub Copilot, ChatGPT
Tools & Platforms	Docker, Linux, Git/GitHub, Nginx, pytest, SQLite
IT & Networking	Windows Server, Aruba networking, PCI-DSS

PROJECTS

Chess Teacher | chess.willcolumbia.me — Oct 2026 – Present

Python, Flask, JavaScript, Docker

- Built a web app that reviews chess games move by move, explains each mistake, and teaches openings
- Developed the back end in Python (Flask) and the front end in JavaScript, connected through a REST API
- Integrated the Chess.com API to import a player's recent games and the Stockfish chess engine to score each move
- Used Claude Code to implement the Stockfish engine quickly and launched the site publicly within two weeks of starting
- Wrote automated tests with pytest and deployed the app in Docker

Server Monitoring Dashboard | status.willcolumbia.me — 2026

Python, JavaScript, Docker, Linux

- Built a data pipeline in Python that collects server metrics every minute, summarizes them into 15-minute averages, and keeps a 24-hour history
- Created a JSON API and web dashboard that display CPU, memory, network traffic, and site uptime
- Limited the public data to approved fields so internal server details stay private
- Hosted on a personal Linux server that also runs my other applications in Docker

PitStop Pro | Senior Capstone — 2023 – 2024

Python, Django, SQLite

- Built a business management web app for an auto repair shop as part of a five-person team
- Developed the scheduling calendar, inventory tracking, and customer contact pages
- Added customer text messaging with the Twilio API
- Reorganized the database models and fixed bugs in the employee payroll module

Additional Projects

- **Network Rack Simulator** (in progress): learning FastAPI and React by building an app for practicing switch and VLAN configuration on a virtual rack
- **Flight Delay Analysis** (coursework): wrote Python MapReduce jobs on Hadoop that cleaned U.S. airline data and calculated taxi times by airline and airport

EXPERIENCE

IT Technician I | Wild Dunes Resort, Charleston, SC 2026 – Present

- Troubleshoot payment system issues by tracing transactions across integrated platforms to find the root cause
- Standardized configuration records for 113 network switches and flagged inconsistencies for correction
- Configure VLANs, switch ports, and access points on Aruba equipment and troubleshoot Windows and Linux systems
- Support PCI-DSS compliance by maintaining access controls, firewall rules, and endpoint protection

Account Manager | Plus Inc., Greenville, SC 2024 – 2025

- Redesigned Salesforce reports and dashboards for pipeline, forecast, and ROI data, which the company adopted as its standard format
- Closed an average of $252,000 per year in hardware and SaaS sales by matching client needs to technical solutions

Teaching Assistant, Computer Science | University of South Carolina 2022 – 2024

- Helped students work through programming assignments and debug code in Python and C++
- Contributed to a 20% improvement in department pass rates

EDUCATION

B.S. Computer Science | University of South Carolina, Columbia, SC May 2024

Relevant coursework: Database Systems, Data Mining, Statistics, Data Structures & Algorithms, Artificial Intelligence
